

## Tata Projects Successfully Executes Important Transmission Line Project In Thailand

This 41.42-km transmission line of 500kV will strengthen Bangkok's electricity grid.

**Mumbai, August 29th, 2019:** TATA Projects Limited, one of India's fastest growing and most admired infrastructure companies, has successfully executed an important 41.42-km transmission line project of 500kV in Thailand.

A consortium of Tata Projects Ltd & TEDA Company Ltd was earlier awarded this prestigious transmission line project by Electricity Generating Authority of Thailand (EGAT). The total line length is 78.5km and Tata Project-TEDA consortium executed the major portion comprising 41.42km.

This 500kV RoiEt 2 – Chaiyaphum 2 Transmission Line is part of the Transmission System Improvement Project in North Eastern, Lower Northern, Central Regions and Bangkok Area. It will further assist in enhancing system security. Completion of this project will support the ASEAN Power Grid (APG) system under the Alternative Energy Development Plan (AEDP) of the government.

**Mr. Vivek Gautam COO-Transportation and T&D Tata Projects Ltd.**

Speaking about this unique project, Mr Vivek Gautam, COO – Transportation and T&D, Tata Projects Ltd, said, "We are proud to successfully execute this prestigious project within schedule timeline. With this successful project execution, we have effectively established our presence in this niche high technological business segment, especially across a new geographical area. This project has proven our ability, technological know-how and management excellence. It will assist us in securing more such projects in this increasingly important part of the world."

Across Thailand's Transmission Line Network, the Tata Projects consortium is the only one to have used Safety Fall Protection system during project's erection and stringing activities. The equipments related to safety fall protection system were imported from India.

The resources and expertise for execution of 500kV Transmission Line are very limited within Thailand. In fact, there are very few sub-contractors who can work for 500kV projects in Thailand. This project has provided opportunities to small Thai sub-contractors (115 & 230 kV) to work for 500kV under the guidance of Tata Projects' expert team. This will ultimately help to increase resources, especially manpower skills in Thailand for execution of 500kV projects in future.

**About TATA Projects Limited:**

TATA Projects Limited is one of the fastest growing and most admired infrastructure companies in India. It has expertise in executing large and complex urban and industrial infrastructure projects.

TATA Projects operates through its four Strategic Business Groups (SBGs) namely Industrial Systems SBG, Core Infra SBG, Urban Infra SBG, and Services SBG.

The company provides turnkey end-to-end solutions to set up power generation plants, power transmission & distribution systems, fully integrated rail & metro systems, commercial buildings & airports, chemical process plants, water and waste water management solutions, complete mining and metal purification systems, and quality inspection services.

The company is driven to deliver projects on-time, using world-class project management techniques and has uncompromising standards of safety.
